BIOCERA	Beauty & Med	Various application products using Biocera balls, including A.A filters and Ionizers	<p># Water and Air Filtering, with the usage of Bio-Ceramic material</p> <p>1. Product Information  1) Biocera Ceramic Ball  – Starting with the crystal growth technology research of its founder, Dr. Jeon Hyeong-tag, Biocera Ceramic Balls were developed in the 1990s and are still under development. Biocera Ceramic Balls (AO, SP, PW, TO, CA, AG, IP, and RC balls) received the world's first certification of the safety of water purification materials from the U.S. NSF in the 2000s.  – It also holds intellectual property patents for ceramic ball manufacture in the U.S., China, and Korea. Biocera Balls, material for water purification, maintain the lasting function of Alkali Hydrogen Minerals when applied to water purification filters and boast the world's highest water quality</p> <p>2) Biocera A.A Filter  – Applying the world's first NSF 42/61/372 certified Biocera ceramic ball, Hydrogen Alkali Filter is rich in minerals, increases pH, and alkalizes water to help neutralize acidity and remove active oxygen in the body.  – Due to the small size and low surface tension of the water molecules that have passed through the filter, it is easy to absorb into the body thanks to its high permeability, and it activates metabolism to quickly release unnecessary waste from the body. In addition, Biocera filter helps consume abundant minerals such as Mg, Ca, K, and Na required by the human body. There is a wide range of filters, spanning from small water purifiers used at home to large-capacity filters used for commercial purposes such as coffee shops, restaurants, and agriculture."</p> <p>3) Natural Healthcare &amp; Beauty product  – Alkaline Water Ionizer, Hydrogen Water Mist, Fruit Vita Shower Filter, A. Bangwool Land Co.	Others	Bubble Toys	<p>The Magic Bubble Conc set consists of 200 g of Magic Bubble Conc (concentrate) and plastic tools such as a tray and ring. The user (consumer) mixes 200 grams of the concentrate with water (tap water) to make 1 liter of soap bubble solution and then uses this to play with big bubbles.</p> <p>Bubble Conc. B 50ml is a large bubble concentrate product enclosed in a vinyl pouch container. The consumer mixes Bubble Conc. B 50ml and tap water in a 1:9 ratio (professional) to make a solution and then uses it for playtime or games with bubbles. The mixed bubble solution creates ample bubbles that have good elasticity and last for prolonged time. Therefore, various new and fun types of bubble playtime and games are possible. As shown in the photo below, follow the dilution-mixture method by pouring 450ml of water into a 500ml empty PET bottle, opening the top of Bubble Conc. B 50ml, and pouring all the contents into the bottle. Finally, close the PET bottle cap tightly and shake it up and down.</p>	Explore export channels and distribution networks in the Indian market	Importers / Industry Association	-

TRACLE INC	Beauty & Med	MESONEEDLE,CANNULA,HAFILLER, PLLAFILLER	<p># REJUBEAU HA Filler</p> <p>1. Product List 1) REJUBEAU LE CIEL ROSY PLLA FILLER medical device that is injected into the skin, specifically into the dermal layer. It promotes the production of natural collagen, which helps to improve volume and skin texture. Typically, a series of 2-3 treatments can provide effects that last for about 2 years.</p> <p>2) REJUBEAU STYLISH HA FILLER Stylish HA Filler is a medical device that is injected into the skin to improve the appearance of fine lines, deep wrinkles, skin depressions, and sagging areas. It helps to create a natural-looking volume and the effects can last for approximately 8-12 months.</p> <p>3) REJUBEAU EXTRA FINE CANNULA cannula is a blunt-tipped needle that is used in various medical procedures, including dermal filler injections. Compared to meso needles, cannulas have a broader tip and are designed to minimize the risk of damaging blood vessels and nerves. This makes them a safer option for treating larger areas of the face, as they reduce the likelihood of complications such as bleeding, bruising, and swelling.</p> <p>4) REJUBEAU FINE MESO NEEDLE Fine meso Needle is a type of needle commonly used in dermal filler injections and other aesthetic procedures. It comes in various sizes to accommodate different types of treatments. One of the advantages of this needle is its larger inner diameter, which allows for smoother product injection compared to other needles. This makes it easier for practitioners to inject the product evenly and accurately, resulting in better outcomes for the patient.</p>	Explore export channels and distribution networks in the Indian market	Importers	-

SRBIOTEK	Beauty & Med	Born from IDENEL's patented technology, it is effective for anti-aging and improving problematic skin, and is a professional line designed with a customized 2-STEP approach tailored to different skin types. (Based on spicules – biomicroneedles)	<p>World's FIRST refined spicule used in cosmetic  IDENEL is the FIRST to pioneer the development of micro-needles extracted from the skeleton of sponges. These micro-needles called spicule, half the size of a pore, possess an ultrafine bed structure that acts effectively from within the skin, activating the skin's regeneration cycle.</p> <p>PRODUCTS  {PRE-TREATMENT LINE}  1. Purifying Enzyme Powder Cleanser  &gt; For building the foundational strength of the skin, a powder cleanser that clears away impurities and dead skin cells  1) Function : Cleansing and exfoliation  2) Key Ingredients : Papain, Ceramide Complex, 8-Fold Hyaluronic Acid, Niacinamide  3) How to use  Mix a small amount of powder cleanser with water to create a foam, then apply it to the skin. Cover with a warm, damp cloth and leave for 2-3 minutes (a steamer can also be used). Remove the cloth, moisten fingertips with a small amount of water for rolling, and then rinse thoroughly with lukewarm water.  4) Volume : 60g</p> <p>2. Brightening Skin  &gt; Elastic toner for clear skin, with Altumpeptide elasticity boosting.  1) Function : Brightening, wrinkle-improving dual-functional cosmetics  2) Key Ingredients : Glutathione, tranexamic acid, niacinamide  3) Benefit : Enhanced effectiveness with glutathione to increase the separation rate of peptides. Helps cultivate bright and clean skin with a combination of key ingredients for triple-focused spot care. Completes a smooth skin texture by filling the skin with moisture with its highly concentrated essence-type texture  4) How to use : After cleansing, dispense the product onto your palm and gently pat it onto your skin until absorbed.  5) Volume : 200 ml</p> <p>3. Intensive Mist  Altum peptide mist infused with collagen for added skin vitality  1) Function : Brightening, wrinkle-improving dual-functional cosmetics  2) Key Ingredients : Glutathione, low molecular weight collagen, hydrolyzed collagen, common jasmine flower water, niacinamide, green tea extract  3) Benefit : Glutathione increases the separation rate of peptides, maximizing effectiveness. Contains over 77% of collagen water with a molecular weight of 300 Daltons or less, strengthening skin moisture. Nutrient ingredients are micronized to adhere to the skin, maintaining moisture for a long time. Sprays smoothly onto the skin without clumping or lumping, ensuring a smooth application.  4) How to use : After cleansing, lightly spray it onto the face and gently absorb it into the skin.  5) Volume : 110 ml</p> <p>{TREATMENT LINE}  PEPTAXEL Program  Born from IDENEL's patented technology, it is a professional line designed with a customized 2-STEP approach tailored to different skin types  1) Function : Brightening, wrinkle-</p>	Explore export channels and distribution networks in the Indian market	Importers	-

READI ROBUST MACHINE	Korea Build	Smart energy recovery system	<p># Smart Energy Recovery System, READIX</p> <p>1. Product Information            – READIX is a product that supports the rotation of engine by using the potential energy which is generated by moving down the boom. Normally, we do waste the potential energy on the excavator.            – When the bucket(boom) moves down, the oil inside of boom cylinder flows to the tank. It is typical operation on the excavator. However, we found the solution how to use the potential energy generated by moving up the boom and this system can reduce the fuel cost. We expect to improve the energy efficiency by 20-30%. In addition, the carbon emissions can be reduced equally.            – You can use the easy application on the google apps and app store for selecting the eco mode, power mode and normal mode.</p>	Explore export channels and distribution networks in the Indian market	Indian Local Government / Public Institutions / Importers	–
Agricultural Corp. Humanwell Co. GLOBALENP Inc.	Safety & Smart City	SMART VARIABLE AIR VOLUME SMOKE CONTROL SYSTEM, PRESSURIZED ELEVATOR SHAFT SMOKE CONTROL SYSTEM, VARIABLE AIR VOLUME CONTROL SYSTEM, FLAP DAMPER, THE EXHAUST WINDOW	<p># Smoke Control Technology</p> <p>1. Product Information  1) Smart Smoke Control System: Smart Variable Air Volume Smoke Control System &amp; Smart Zoned Smoke Control System]  – For the smart smoke control system, it can be categorized into 'Smart Variable Air Volume Smoke Control System', which is applicable to high-rise buildings, and 'Smart Zoned Smoke Control System', which is suitable for large spaces such as power plants or factories.  – The 'Smart Variable Air Volume Smoke Control System' allows dampers, which previously required manual operation, to be adjusted centrally from the disaster prevention room. In the disaster prevention room, real-time pressure differentials across all floors can be measured, and dampers self-diagnosis function makes it easy to identify the status of any faulty dampers. Additionally, because the system is based on IoT technology, information received in the disaster prevention room can be accessed via smartphones and laptops. The system is also connected to the cloud, enabling real-time monitoring by the fire department for more efficient firefighting operations.  – The 'Smart Zoned Smoke Control System' is designed to divide large spaces into smaller smoke control zones and manage smoke within those zones. In the event of a fire, the system adjusts the supply/exhaust airflow within the fire zone to prevent the spread of smoke to other zones. Similar to the 'Smart Variable Air Volume Smoke Control System' previously described, this system allows for real-time monitoring of supply/exhaust airflow from the disaster prevention room and it is also based on IoT technology.</p> <p>2) Pressurized Elevator Shaft Smoke Control System  – The 'Pressurized Elevator Shaft Smoke Control System' uses elevator shaft to pressurize fresh air inside the vestibule instead of vertical duct. Compared to traditional vertical duct methods, this system provides increased space utilization by allowing additional floor area and offers significant cost savings due to the elimination of vertical duct construction. The 'Pressurized Elevator Shaft Smoke Control System' is not only a fire protection technology but also requires comprehensive consideration of various aspects such as architecture, electrical systems, structural design, and elevators, necessitating a multidimensional review.</p> <p>3) Flap Damper  – Flap damper is an overpressure relief device designed to address situations where the pressure inside a vestibule becomes higher than the external pressure during a fire, making it difficult to open the door. When the internal pressure of the vestibule exceeds an appropriate level, the damper releases the excess pressure to the outside, thereby maintaining the internal pressure at a suitable level. It is a purely mechanical device that operates without the need for electrical installations and is highly effective, functioning even at minute pressure levels as small as 1 Pa.</p>	To experience the Indian market	Importers	-

ITS CO., LTD	Safety & Smart City	Optical network traffic signal control system	Optical network traffic signal control system > Product Info - ITS 2911, the basic control unit of the new technology traffic signal control system - ITS-2911-2912 series, is an individually combinable system that provides optical network transmission solutions optimally tailored to customer requirements. The ITS-2911-2912 series already covers a wide range of applications. Simple intersections, such as crosswalks or complex intersections, can be implemented using fixed or mobile systems and central or distributed structures, depending on the requirements. - This is a system that detects vehicles waiting at an intersection and sequentially controls signals starting from the side with the most vehicles. It is a carbon dioxide reduction system that dramatically reduces waiting time and provides real-time signal control. > Sales Point - Traffic light system - can be configured individually or in groups - Optical communications can form a private group system solution. - A signal control system is possible regardless of distance. - Easily expandable regardless of existing structure, lamp type, or cable - We will be happy to assist you with your project and programming throughout the project process. - All components comply with current standards for road transport facilities. emCT co., Ltd.	Safety & Smart City	BDApp, a mobile facility management service that works with any existing facility	<p>BDApp – Mobile Facility Management</p> <p>&gt; Product Info</p> <p>– Our product's core technology involves IoT data acquisition and control devices that analyze internal communication signals within facilities using various artificial intelligence algorithms such as Sniffing and Man In The Middle, enabling data collection and implementation of remote control and integration with smartphones. This service converts non-IoT conventional facilities into IoT-enabled remote monitoring services.</p> <p>– By collecting and analyzing communication signals within existing equipment through IoT data acquisition and control devices utilizing artificial intelligence deep learning algorithms, or through cameras, our service allows real-time monitoring and remote control of equipment via smartphones without replacing existing equipment or using mechanical contact methods.</p> <p>– Particularly, including remote monitoring of fire protection systems, our solution addresses frequent malfunctions of fire detectors using artificial intelligence big data to detect and immediately recover from fire protection malfunctions remotely, enabling prompt response to fire incidents.</p> <p>&gt; Sales Point</p> <p>1. Utilization of Existing Facilities We utilize artificial intelligence and algorithms to collect and control data without replacing existing equipment. Additionally, even older mechanical equipment can be monitored by recognizing panel information through cameras.</p> <p>2. Distinctive Equipment Interface Technology Our unique interface technology allows us to collect fire protection equipment data and verify fire locations and equipment status. This capability extends across manufacturers and models, enabling universal data collection.</p> <p>3. Remote Control Capability Integration with mobile apps enables comprehensive management of facilities. Utilizing artificial intelligence big data, we detect malfunctions in fire detectors and promptly recover and respond to fire incidents remotely.</p> <p>4. Facility Integrated Control Function We monitor fire alarm receivers and other equipment across multiple buildings using a single app. In case of equipment malfunctions, immediate action can be taken by checking CCTV at the respective location via smartphone. We also support integrated management of various facilities including parking, elevators, reservoirs, and drainage pumps.</p>	Explore export channels and distribution networks in the Indian market	Indian Local Government / Public Institutions	-

YookSong Co., Ltd.	Safety & Smart City	Fire Safety Products	<p>#1. Small-space automatic fire extinguisher(E-Fire Solution)</p> <p>The small-space automatic fire extinguisher(E-Fire Solution) is a product designed to detect and automatically extinguish small fires occurring inside electrical distribution panels, control panels, and similar enclosures, preventing the spread of large-scale fires. It has the advantage of being harmless to humans and causing no secondary damage to equipment after extinguishing the fire. The device operates by having a glass bulb that bursts when heated by fire, releasing a compressed spring that drives a pin to rupture a disc, discharging the compressed extinguishing agent. Although compact in size, it expands to 70 times its volume upon fire suppression, rapidly extinguishing the fire. Additionally, it is equipped with a limit switch, allowing remote monitoring and management of the extinguisher's operation and status. The extinguishing agent used is HFC-125, a clean agent certified by UL.</p> <p>#2. Water nozzle</p> <p>The nozzle is ideal for fire prevention, specifically designed for use with fire hoses. It offers selectable shut-off and flow control functions, as well as straight stream and fog flow modes, all accessible through a simple twist of the front head. When connected to a fire hose, this nozzle can be used in either straight stream or spray mode. In particular, the fog spray mode helps shield the user from radiant heat, providing protection during firefighting operations. Additionally, it excels in fire suppression and offers exceptional cooling effects after use.</p> <p>#3. Fire hose</p> <p>The fire hose is manufactured with a jacket made of polyurethane or Ethylene Propylene Diene Monomer (EPDM) rubber lining, along with bronze couplings, offering excellent resistance to abrasion, chemicals, ozone, and weathering. This makes it suitable for use in fire departments, petrochemical industries, marine industries, and the energy sector. All materials used in the hose coupling and lining can be custom-made according to technical specifications. Single jacket hoses are typically used in standard buildings, apartments, and condos, while double jacket fire hoses are commonly employed in chemical plants, oil refineries, factories, and fire trucks. The main structure of the Yooksoong fire hose is distinguished by plain and twill weaves, providing superior softness and uprightness compared to other fire hoses.</p>	Explore export channels and distribution networks in the Indian market	Importers	–

Human Air Technology Corporation	HVAC	Air Handling unit(AHU)	<p>An Air Handling Unit is a device that keeps indoor air in a pleasant condition. And it creates an optimal indoor air environment by cooling, heating, humidifying, dehumidifying, and filtration. This customized air conditioning equipment supplies clean air inside large buildings and facilities to keep them in compliance with environmental standards. Our company is a trustworthy company that supplies air conditioners designated as excellent procurement products by the Korea Public Procurement Service.</p> <p>In addition, major partners include domestic first-tier construction companies such as Samsung C&amp;T Construction Division, Hyundai Engineering &amp; Construction, Hyundai Engineering, Shinsegae Engineering &amp; Construction, POSCO E&amp;C, Shin Donga Construction, Lotte Engineering &amp; Construction, Daewoo Engineering &amp; Construction, Kumho Engineering &amp; Construction, KCC Engineering &amp; Construction, Kolon Global, and Hanwha.</p> <p>We manufacture Air Handling Unit (AHU) by applying a number of excellent domestic patent technologies (1. Air Handling Unit with electrolytic water. 2. Tilting adjustable heat pipe. 3. Energy-saving air conditioner using waste heat), and overseas certification technologies(AHRI, CE certification). What's special about it is  ①It has the ability to sterilize viruses (including COVID-19), sterilize bacteria, remove ultrafine dust, and reduce odors by spraying electrolytic water on the filament (acquiring an official test report) ② A significant increase in heat exchange performance (15% to 30%) ③semi-permanent durability and maintenance costs are very low. And Our company has its own factory, so we can supply products stably.</p> <p>Other products include cooling towers, refrigerators, and fan coil units.</p> <p>Since its foundation, our company has specialized in manufacturing refrigeration and air conditioning equipment with excellent technology and decades of field experience.</p> <p>By providing quick and accurate services based on technology researched by top engineers, We will do our best to become a customer-centered company that can come one step closer to customers in a more comfortable environment. Thank you.</p>	Explore export channels and distribution networks in the Indian market	Indian Local Government Public Institution Importers Industry Association	-

Queen Art Co.,Ltd.	Food & Food Tech	cookware	<p># Pan, Wok, Pot of diverse designs and different sizes</p> <p>1. Main Product line 1) Jade-ceramic coating Frying pan, Pot – JadeCera is an advanced ceramic coating pan that brightens the kitchen atmosphere with a fresh color. Unlike ordinary ceramic coatings, it shows excellent non-stick performance for easy cooking and cleaning. In addition, its coating hardness is amazing enough to pass 500,000 cycles abrasion test, so it can be used for a long time. It does not contain harmful substances such as PFOA or PFOS, and 99.99% of antibacterial function is applied to the coating.</p> <p>2) Inoble coating pan, pot – It is truly oil free 10 layer non-stick coating cookware. Amazing non-stick coating guarantees easy cooking and cleaning is a breeze. And, traditional layer-based coatings are easily broken but this pan has innovative coating strength based on patented strong combination-structure of numerous coating particles. It is a safe one which comply with FDA regulation and got LFGB certificate.</p>	Explore export channels and distribution networks in the Indian market	Public Institution Importers Industry Association	-

GLOBALENP Inc.	Safety & Smart City	SMART VARIABLE AIR VOLUME SMOKE CONTROL SYSTEM, PRESSURIZED ELEVATOR SHAFT SMOKE CONTROL SYSTEM, VARIABLE AIR VOLUME CONTROL SYSTEM, FLAP DAMPER, THE EXHAUST WINDOW	<p># Smoke Control Technology</p> <p>1. Product Information  1) Smart Smoke Control System: Smart Variable Air Volume Smoke Control System &amp; Smart Zoned Smoke Control System]  – For the smart smoke control system, it can be categorized into 'Smart Variable Air Volume Smoke Control System', which is applicable to high-rise buildings, and 'Smart Zoned Smoke Control System', which is suitable for large spaces such as power plants or factories.  – The 'Smart Variable Air Volume Smoke Control System' allows dampers, which previously required manual operation, to be adjusted centrally from the disaster prevention room. In the disaster prevention room, real-time pressure differentials across all floors can be measured, and dampers self-diagnosis function makes it easy to identify the status of any faulty dampers. Additionally, because the system is based on IoT technology, information received in the disaster prevention room can be accessed via smartphones and laptops. The system is also connected to the cloud, enabling real-time monitoring by the fire department for more efficient firefighting operations.  – The 'Smart Zoned Smoke Control System' is designed to divide large spaces into smaller smoke control zones and manage smoke within those zones. In the event of a fire, the system adjusts the supply/exhaust airflow within the fire zone to prevent the spread of smoke to other zones. Similar to the 'Smart Variable Air Volume Smoke Control System' previously described, this system allows for real-time monitoring of supply/exhaust airflow from the disaster prevention room and it is also based on IoT technology.</p> <p>2) Pressurized Elevator Shaft Smoke Control System  – The 'Pressurized Elevator Shaft Smoke Control System' uses elevator shaft to pressurize fresh air inside the vestibule instead of vertical duct. Compared to traditional vertical duct methods, this system provides increased space utilization by allowing additional floor area and offers significant cost savings due to the elimination of vertical duct construction. The 'Pressurized Elevator Shaft Smoke Control System' is not only a fire protection technology but also requires comprehensive consideration of various aspects such as architecture, electrical systems, structural design, and elevators, necessitating a multidimensional review.</p> <p>3) Flap Damper  – Flap damper is an overpressure relief device designed to address situations where the pressure inside a vestibule becomes higher than the external pressure during a fire, making it difficult to open the door. When the internal pressure of the vestibule exceeds an appropriate level, the damper releases the excess pressure to the outside, thereby maintaining the internal pressure at a suitable level. It is a purely mechanical device that operates without the need for electrical installations and is highly effective, functioning even at minute pressure levels as small as 1 Pa.</p>	Explore export channels and distribution networks in the Indian market	Public Institution Importers Local builders and real estate developers in India	DLF(Real Estate) / Lodha Group(Real Estate) 등

emCT co., Ltd.	Safety & Smart City	BDApp, a mobile facility management service that works with any existing facility	<p>BDApp – Mobile Facility Management</p> <p>&gt; Product Info</p> <p>– Our product's core technology involves IoT data acquisition and control devices that analyze internal communication signals within facilities using various artificial intelligence algorithms such as Sniffing and Man In The Middle, enabling data collection and implementation of remote control and integration with smartphones. This service converts non-IoT conventional facilities into IoT-enabled remote monitoring services.</p> <p>– By collecting and analyzing communication signals within existing equipment through IoT data acquisition and control devices utilizing artificial intelligence deep learning algorithms, or through cameras, our service allows real-time monitoring and remote control of equipment via smartphones without replacing existing equipment or using mechanical contact methods.</p> <p>– Particularly, including remote monitoring of fire protection systems, our solution addresses frequent malfunctions of fire detectors using artificial intelligence big data to detect and immediately recover from fire protection malfunctions remotely, enabling prompt response to fire incidents.</p> <p>&gt; Sales Point</p> <p>1. Utilization of Existing Facilities We utilize artificial intelligence and algorithms to collect and control data without replacing existing equipment. Additionally, even older mechanical equipment can be monitored by recognizing panel information through cameras.</p> <p>2. Distinctive Equipment Interface Technology Our unique interface technology allows us to collect fire protection equipment data and verify fire locations and equipment status. This capability extends across manufacturers and models, enabling universal data collection.</p> <p>3. Remote Control Capability Integration with mobile apps enables comprehensive management of facilities. Utilizing artificial intelligence big data, we detect malfunctions in fire detectors and promptly recover and respond to fire incidents remotely.</p> <p>4. Facility Integrated Control Function We monitor fire alarm receivers and other equipment across multiple buildings using a single app. In case of equipment malfunctions, immediate action can be taken by checking CCTV at the respective location via smartphone. We also support integrated management of various facilities including parking, elevators, reservoirs, and drainage pumps.</p>	Explore export channels and distribution networks in the Indian market	Indian Local Government Public Institution Importers	LH
